Summary

Full-stack software engineer with 2 years building and scaling production web apps in **TypeScript** across the **MERN/MEVN** stack. #1 contributor on a multi-tenant HR SaaS, where I owned the frontend and led a backend optimization program that raised documented code quality **4.5→8.6/10** and cut authentication latency **76%**. I own features end-to-end, from schema and APIs to React UI, focused on performance, clean architecture, and AI-powered features.

Experience

WorkCompanion LLP

Oct 2024 – Present

Software Engineer

Gurugram, Haryana

- #1 contributor and frontend owner across a multi-tenant Performance Management System (PMS) SaaS: a Node.js/TypeScript backend and three React/TypeScript portals (Employee, Manager, HR), shipping features end-to-end from MongoDB models to REST APIs to Redux/React UI (~**1,500 commits across 3 repositories**).
- Led a backend optimization program that raised code quality **4.5→8.6/10** and delivered documented internal improvements of approximately **4–5× throughput**: reduced authentication latency **76% (145→35ms)** with Redis caching, eliminated an N+1 bottleneck (**2.5s→300ms**), and added **44 MongoDB indexes**.
- Built AI-powered enterprise features including an **OpenAI GPT-4.1-mini** appraisal-question generator supporting prompt and document (PDF/DOCX/CSV) inputs, and integrated **tl;dv** meeting intelligence to automatically generate performance-review summaries from meeting transcripts.
- Re-architected the backend into a layered design with **26 services**, **13 aggregation pipelines**, and shared business modules while improving multi-tenant reliability, transaction safety, observability, and maintainability.
- Delivered core PMS modules end-to-end including the Appraisal Cycle Engine, 360° Feedback, RBAC, Timeline Engine, Question Bank, Notifications, and Excel Import/Export, serving production enterprise customers.

Agami Technologies

June 2024 – Oct 2024

Software Specialist

Greater Noida, Uttar Pradesh

- Resolved **398+ bugs** across modules through effective debugging and close collaboration with QA and product teams.
- Delivered **7+ core features** and contributed to **24+ system improvements**, optimizing UI behavior, usability, and backend efficiency.
- Integrated **OpenAI** into the **BeGenieus** platform: direct GPT chat for instant answers, AI-powered image generation, and AI-driven features across multiple modules.
- Worked across the **MEVN stack** (MongoDB, Express, Vue.js, Node.js) with Socket.io for real-time features.

Projects

Candor | Next.js, TypeScript, MongoDB, Gemini, Redis

[Live](#) | [Code](#)

- AI growth loop**: Gemini-powered safety moderation + an AI Feedback Coach that clusters anonymous feedback into a trackable growth plan, with AI reply suggestions streamed to senders.
- Real-time inbox via **Server-Sent Events** + **MongoDB change streams**; idempotent credit ledger with per-user AI quotas (atomic Redis INCRBY), NextAuth (Credentials + Google OAuth), an admin console, and full CI.

InsightBlog | React, Hono, Prisma, Neon Postgres, Cloudflare Workers

[Live](#) | [Code](#)

- Domain-driven serverless backend** across 5 phases: JWT auth (access/refresh, RBAC), full blog lifecycle, and a social graph (comments, likes, follows, notifications, recommendations).
- AI writing assistant (Gemini) with a grounded engagement forecast, a multi-source Trending Hub, and author/admin analytics dashboards; shared Zod DTOs via npm workspaces.

SQLPlay | React, TypeScript, Vite, SQLite (WebAssembly)

[Live](#) | [npm](#) | [Code](#)

- A zero-setup, H2-Console-style SQL playground running a real in-memory SQLite database 100% in the browser via WebAssembly (sql.js) — **published on npm** and launched with a single `npx sqlplay`.

Technical Skills

Languages: TypeScript, JavaScript (ES2022+), HTML/CSS, SQL

Frontend: React, Next.js, Redux Toolkit, TanStack Query, Vue.js, Tailwind CSS, MUI, Vite

Backend: Node.js, Express.js, Hono, Cloudflare Workers, AWS S3, REST APIs, SSE, Socket.io, Zod, JWT / NextAuth

Databases & Caching: MongoDB / Mongoose, PostgreSQL / Neon, MySQL, Prisma, Redis / Upstash

AI: Google Gemini, OpenAI (GPT), Vercel AI SDK

Tools & Testing: Git, GitHub Actions (CI/CD), Vitest, Jest, Playwright, ESLint, Prettier

Education

Ganga Institute of Technology & Management (GITAM)

Aug. 2021 – Aug. 2024

Bachelor of Technology (B.Tech), Mechanical Engineering

Jhajjar, Haryana
